

New Earth

Description: With just a few short and easy techniques, i'll show you how to create your own new planet earth.

Start a new document 600x600. Set the foreground and background to Blue and White.

Then Go to **Filter->Render->Clouds**

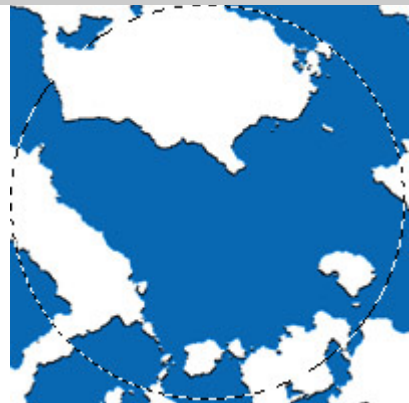

Then go to **Filter->Sketch->Note Paper.**

Image Balance: 35

Graininess: 0

Relief: 25

You can play around with the image balance to get the shapes of your continents.

Use the circular marquee tool and make a round selection as big as you can on the image. Hold down shift while making the selection ensures you get a perfect circle.

Then go to **Filter->Distort->Spherize**

Amount: 100%

Then **Edit->Copy**

Then **CTRL+N** to create a new document.

The newly created document size should be left as is because photoshop will use the size of the copied image, else, just create a new document about 650x650.

Then in the new document, go to **Edit->Paste** to paste the image onto the new document.

You should now have a globe on white background.

Add a **1 pixel stroke** to the image.

A little bit of modification, I came up with this.
